SUMMARY OF QUALIFICATION

Full Stack Software Engineer with hands-on experience developing web applications using MERN stack. Proven track record in test automation, API development, and cloud deployment with AWS. Seeking entry-level software development opportunities.

TECHNICAL SKILLS

- **Frontend Development:** HTML, CSS, JavaScript ES6+, React.
- **Backend Development:** Express.js, Node.js, MongoDB Atlas, REST APIs, RESTful APIs, Python, C++.
- **Testing:** Cypress, Appium, WebDriver IO, Postman, k6.
- **Tools & Platforms:** Vercel, Git/GitHub, Figma, AWS (EC2, Route 53).

WORK EXPERIENCE

Seeka Technologies – Internship (Apr 2024 - Aug 2024)

Role: Quality Assurance Engineer Intern

Responsible for conducting manual and automated testing for both mobile and web applications as well as supervising/teaching new interns.

- Utilized tools such as Postman, JMeter, Cypress, and Appium for performance and functional testing.
- Integrated metrics to iOS testing using Xcode Instruments to track the applications' performance based on user load and/or connection speed.
- Integrated and documented setup and execution of Appium for automation testing on physical/virtual mobile devices in order to execute and test user flows.
- Mentored 12 interns on test automation, reducing onboarding time from 4 weeks to 2 weeks.

PROJECTS

Career Compass Platform – (Final Year Project, Dec 2024)

Developed a **web platform** using the Agile SDLC to help students explore and choose **undergraduate courses** based on their interests and career aspirations. [[website](#)]

- Designed a dynamic interactive UI using **React, CSS, and JavaScript**.
- Integrated backend APIs with **Node.js and Express.js** for data processing and deployed on **Vercel**.
- Architected **MongoDB** database schema for efficient storage and retrieval of user profiles.
- AI chatbot integration using **OpenAI API** to provide real-time career guidance and answer student queries.

Spotify Total Streams Viewer – (Personal Project, Feb 2025)

Built a web application using the Agile SDLC process that allows users to view **total stream counts for Spotify** of all songs and albums, a feature not natively accessible. [[website](#)]

- Built backend infrastructure using Node.js and Express.js to handle concurrent API requests and data transformation.
- Integrated backend APIs with **Node.js and Express.js** providing real-time stats access.
- Configured production environment on AWS EC2 with custom domain routing via Route 53, implementing SSL certificates and load balancing.
- Optimized API performance reducing load times by 20%.

EDUCATION

Xiamen University

Bachelor of Engineering in Computer Science
(Honors)

Selangor, Malaysia
Feb 2021–Jan 2025

AWARDS & HONORS

Best Final Year Project Award (2nd Place) – Xiamen University

Award granted for academic project final year project. *School of Computing and Data Science, Academic Session 2024/09*

Project: Career Compass – A STEM Career Discovery Platform

Dean's List Award – Xiamen University

Award granted for outstanding academic achievement for Academic Session 2024/09 with a 3.7 GPA.

*School of Computing and Data Science, 2024/09 Semester
For Outstanding Academic Achievement*
